PRELIMINARY DRAFT LIST OF

PLANT SPECIES

FOR INCLUSION IN A 'RESPONSIBILITY LIST' OF EUROPEAN* PLANTS

Discussion document

for the

UN-ECE Third Consultation of Designated Experts on Flora and Fauna, Tenerife, Canary Islands (16-22 January, 1989).

by the

WORLD CONSERVATION MONITORING CENTRE

The preparation of this list was funded by the Ministry of the Environment, Finland, kindly arranged by the Finnish delegation of the UN-ECE Experts Group on Flora and Fauna.

* 'Europe' covers all Member Countries of the UN Economic Commission for Europe.

Cover drawing: Chamaecytisus neicefii (Leguminosae), an Endangered endemic from Bulgaria.

Digitized by the Internet Archive in 2010 with funding from UNEP-WCMC, Cambridge

WORLD CONSERVATION MONITORING CENTRE

The three partners in the World Conservation Strategy, IUCN, UNEP and WWF, have agreed to support jointly the restructuring and development of the IUCN-Conservation Monitoring Centre so that it can fulfil effectively its role as the focal point for information on the world's biological diversity. Renamed the World Conservation Monitoring Centre, the new Centre is registered in the U.K. as a company limited by guarantee and has applied to the U.K. Charity Commission for charitable status.

	Key to Table 265

INTRODUCTION

Background and Objective

This draft plant species list has been prepared in response to the UN-ECE's Second Consultation of Designated Experts on Flora and Fauna (Zeist, Netherlands, 2-6 May 1988). The list is intended as a contribution to the discussion of 'responsibility species lists' (later referred to as 'Species of Particular Conservation Concern in Europe') by delegates at the 3rd Consultation of Experts on Flora and Fauna, Tenerife, Canary Islands (16-22 January 1989). It is, therefore, a preliminary draft and does not claim to be exhaustive.

Species Selection Criteria

Following the Expert Group's decision regarding the coverage of species within a 'responsibility list' for plants (para. 'II.12. Plants', May 1988 minutes), the following criteria have been used to select species for inclusion in the list presented:

- 1. Plant species which are threatened at a European level,
- Plant species, whether threatened or not, which are endemic to single European countries.

The list is divided into 2 parts to reflect the above, Tables 1 and 2 respectively.

Two additional criteria discussed by the Expert Group, but whose consideration is beyond the scope of the present document, are:

- i) Plant species endemic to Europe as a region, excluding single country endemics, and excluding those species that are threatened;
- ii) Plant species, regardless of whether they are threatened or not, for which more than 50% of their global population or more than 50% of their distributional range lies within the European territory of the ECE Member Countries.

Both these additional criteria would be valuable in ensuring that a responsibility list comprises those species deserving priority conservation action. However, the adoption of such criteria, particularly for plant species, needs careful consideration if the preparation of such a list is to be feasible.

Regarding (i), it is estimated that at least 3,500 plant species are endemic to Europe (Webb, 1978), excluding the USSR. Although this information exists, it would need to be gathered from many sources and would require much taxonomic investigation. Such an exercise is a major task well beyond the scope of the present work. Regarding (ii), this is more ambitious still, because for many species such detailed distribution and population information does not exist, particularly outside Europe. For many non-European countries, national Floras have still to be prepared. Without these, the addition of species according to these criteria would be very difficult. Further investigation and discussion is recommended before a more definite comment can be made as to the adoption of (i) and (ii) for plants.

Coverage of Tables 1 and 2

Table 1 'Rare and Threatened Non-endemic Plant Species' lists, in alphabetical order of genus, all plant species identified as rare or threatened at a European level and present in more than one European country. The European status of each species is indicated in the column headed 'IUCN Regional Status' according to the IUCN Red Data Book Categories (see key at end of Table 1). Also provided, for each species, is its distribution in Europe, conservation status in each country, and status at world level.

The Regional Status is derived from the conservation status of the species in each European country in which it grows. For example, in Europe, Euphorbia hierosolymitana is recorded only from Greece, where it is Endangered, hence its European Regional Status is Endangered too. (Note, however, that its global status is unknown.) Where a species occurs in many European countries, the plant is threatened at Regional level only if it is threatened throughout all, or almost all, of its European distribution (e.g. Aldrovanda vesiculosa and Apium repens).

Although Table 1 has been compiled as a preliminary list of non-endemic plants threatened in Europe, it indicates that at least 800 non-endemic species deserve inclusion in a European responsibility list.

Additional species have been added to the end of Table 1 which are considered to be candidates for the main list in Table 1. They should be treated as candidates because there is currently insufficient data about them to be certain they are threatened throughout all, or very nearly all, of their European distribution. For example, the crucifer Hymenolobus procumbens is threatened in 5 out of the 7 European countries where it grows. Its conservation status in GDR and Spain (Balearic Islands) is not known. For this reason it is not considered appropriate to include in Table 1. There are many species which fall into this candidate group and it is recommended that a list of candidate species be prepared as a complementary list to the responsibility list to provide both a reference point when considering additions to the main list as well to focus on those species in need of field investigation. (A preliminary list of candidate species is appended to Table 1 for reference.)

Table 2 'Endemic Plant Species (confined to one UN-ECE Member Country)' lists, by country, single country endemic species, regardless of whether they are threatened or not. Within each country list, the species are arranged in alphabetical order of genus, annotated with conservation categories for reference.

Table 2 does not claim to be exhaustive, although it is considered near accurate as regards the endemics covered by the Flora Europaea (the most recent and comprehensive Europe-wide flora). The lists for Cyprus and Turkey are known to be very incomplete since they are not included in the Flora Europaea region and a separate screening of the national Floras for these two countries is needed for their completion. For Turkey, the list would be very large since its flora is known to support between 2,000-2,400 endemic species.

Table 2 lists approximately 3,000 single country endemic species. With the addition of the Canary Islands endemic list, estimated to contain over 500 species, together with the equivalents for Turkey and Cyprus, the estimated total number of endemic species for inclusion in a European responsibility list would total c. 5700.

The figures below (derived from the list attached) indicate the approximate number of plant species that would qualify for inclusion in a European responsibility plant list, according to criteria (1) and (2) above:

	Species
Table 1 (single country endemics) Turkey Canary Islands Cyprus Byelorussia	2,000 2,000 500 200
TOTAL NO. SINGLE COUNTRY ENDEMIC SPECIES	5,700 (approx.)
TOTAL NO. NON-ENDEMIC PLANT SPECIES RARE AND THREATENED IN EUROPE	800 (approx.)
GRAND TOTAL	6,500 (approx.)

Source of the data

Plus

The data have originated from the following sources: national and regional Floras, field botanists throughout Europe and published national plant Red Data Books and threatened plant lists. The key conservation publications considered essential for the preparation of a complete European responsibility list for plants are listed below. WCMC welcomes any suggested additions to this reference list. Not all these publications have yet been thoroughly screened for plants deserving inclusion in the species list, hence the responsibility list attached is still a preliminary one.

The data gathered from the below, have been managed using the threatened plants database of the World Conservation Monitoring Centre.
